- Q No.10 Tuckman suggested that groups pass through five developmental sequences. Explain those stages. 4

Section C
This section has 4 Questions

Suppose a group of people in your neighbourhood start a tree plantation campaign as part of a green environment movement. Based on sufficient information about the environment, your view towards a green environment is positive. You feel very happy when you see greenery. You feel sad and angry when you see trees being cut down. These aspects reflect the components of the attitude. Now, suppose you also actively participate in the 'tree plantation campaign'. This shows one of the components of your attitude towards a green environment. In general, we expect all three components to be consistent with each other, that is, in the same direction. Therefore, predicting one component on the basis of the other two may not always give us the correct picture about an attitude.

- Q No.11 Identify and explain the components of attitude. 2
- Q No.12 State the four significant features of attitude. 2
