

مدرسة دلهي الخاصة ذ.م.م.
DELHI PRIVATE SCHOOL L.L.C.
Affiliated to C.B.S.E., DELHI
(Approved & Recognized By Ministry of Education - United Arab Emirates)

PRE BOARD EXAMINATION (2021-22)

TERM I – SET B

SUBJECT : INFORMATICS PRACTICES

TIME ALLOWED: 90 MINS

GRADE – XII

MAXIMUM MARKS: 35

General Instructions:

- The paper is divided into 3 Sections- A, B and C.
 - Section A consists of Question 1 to 25 and student needs to attempt 20 questions.
 - Section B consists of Question number 26 to 49 and student needs to attempt 20 questions.
 - Section C consists of Question number 50 to 55 and student needs to attempt 5 questions.
 - All questions carry equal marks.
-

1. For the given code, predict the output

```
x=[10,20,30,40]
y=pandas.Series([10,20,30,40])
print(x*2)
print(y*2)
```

a. 10, 20, 30, 40, 10, 20, 30, 40]
0 20
1 40
2 60
3 80
dtype: int64

b. 0 20
1 40
2 60
3 80
dtype: int64
[10, 20, 30, 40, 10, 20, 30, 40]
c. [10, 20, 30, 40, 10, 20, 30, 40]
Error
d. Error

3. When an operation is carried out on every value of Series object is called ____.

- a. Scalar Operation
- b. Vector Operation
- c. Both of the above
- d. None of the above

4. Which of the following is NOT an intellectual property?

- a. a. A poem written by a poet
- b. b. An original painting made by a painter
- c. c. Trademark of a Company
- d. d. A remixed song

5. What will be the value stored in the Series P after the code is executed

```
P= pandas.Series([y for y in range(10,70,10)], index=[ x for x in 'abcdef'])
P['a':'c']=300
P[0]=100
P[['a','d']]=200
```

a. a 100
b 300
c 300
d 40
e 50
f 60
dtype: int64
b. a 200
b 300
c 300
d 200
e 50
f 60
dtype: int64
c. a 10
b 20
c 30
d 40
e 50
f 60
dtype: int64
Error

- d. a 300 e 50
b 300 f 60
c 300 dtype: int6
d 40

6. Which of the following is not considered as cyber bullying

 - Hacking into someone's gaming or social networking profile
 - Spreading secrets or rumours about people online
 - Participating in text wars or text attacks.
 - Posting tweets or Facebook posts

7. From the following choose which is not an example of copyright infringement

 - Downloading and sharing music, videos, and games from internet
 - Using a published photograph.
 - Placing full-text articles on a web page
 - Making a movie file or a large segment of a movie available on a web site.

8. What will be syntax for pandas dataframe?

 - pandas.DataFrame(data, index, dtype)
 - pandas.DataFrame(data, index, rows, dtype)
 - pandas_DataFrame(data, index, columns, dtype)
 - pandas.DataFrame(data, index, column, dtype)

9. Which of the following statement will print Series 'S1' in reverse order?

 - print(S1[: : 1])
 - print(S1[: : -1])
 - print(S1[-1: : 1])
 - print(S1.reverse())

10. A figure/chart contains _____

 - Plotting area
 - Legend
 - Axis labels
 - All of the above

11. Proprietary software is a software which is available _____

 - free of charge
 - on paying license fee
 - free for first year only
 - free to use but requires fee for modification

12. Sumita is using her internet connection to book a train ticket. This is a classic example of leaving a trail of web activities carried by her. What do we call this type of activity?

 - Digital login
 - Digital Footprint
 - Digital Log off
 - Digital Error

13. Give the output of the following code

```
S = pandas.Series(['a1','b1','c1','d1','e1'])
print(S[[1,3]])
```

a. 2 c1 dtype: object
3 d1 b. 0 a1
4 e1 1 b1

```

2 c1
dtype: object
c. 1 b1
3 d1
dtype: object

```

```

d. 1 b1
2 c1
3 d1
dtype: object

```

14. After practical, Remi left the computer laboratory but forgot to sign off from her email account. Later, her classmate Sanat started using the same computer. She is now logged in as Remi. She sends inflammatory email messages to few of his classmates using Remi's email account.

Sanat's activity is an example of which of the following cyber-crime?

- a. Plagiarism (b) Hacking (c) Identity theft (d) Cyber bullying

15. Which of the following action can be taken to keep the digital footprint clean?

- a. Search what information you leftover social media and the internet
b. Be smart and sensible while using any website, sending an email or opening a link
c. Control visibility settings from the browser or website/app settings
d. remove any private details like mobile number, school, college name, address, photos etc.

16. Which of the following statements is used to create a histogram of 'step' type with 20 bins?

- a. plt.hist(x, bins = 20, histtype = "barstacked")
b. plt.hist(x, bins = 20)
c. plt.hist(x, bins = 20, histtype = "step")
d. plt.hist(x, bins = 20, histtype = step())

17. Predict the output:

```

import pandas as pd
S1 = pd.Series(data = range(32, 2, -4), index = [x for x in "Rajdhani" ])
print(S1)

```

a)	b)	c)	d)
R 32	0 32	Error	32 R
a 28	1 28		28 a
j 24	2 24		24 j
d 20	3 20		20 d
h 16	4 16		16 h
a 12	5 12		12 a
n 8	6 8		8 n
i 4	7 4		4 i

18. The part of chart which identifies different sets of data plotted on plot by using different colours is called:

- a. legends
b. title
c. axes
d. figure

19. The data points plotted on a graph are called

- a. marker
 - b. points
 - c. pointers
 - d. marks points
20. Using Python Matplotlib _____ can be used to count how many values fall into each interval.
- a. line plot
 - b. bar graph
 - c. histogram
 - d. Pie graph
21. _____ is the attempt to acquire sensitive information such as usernames, passwords and credit card details by masquerading as a trustworthy entity in an electronic communication.
- a. Phishing
 - b. Pharming
 - c. Attack
 - d. Malware
22. What is true about Data Visualization?
- a. Data Visualization is used to communicate information clearly and efficiently to users by the usage of information graphics such as tables and charts.
 - b. Data Visualization helps users in analyzing a large amount of data in a simpler way.
 - c. Data Visualization makes complex data more accessible, understandable, and usable.
 - d. All of the above
23. How many values will be there in array1, if given code is not returning any error?
- ```
>>> series4 = pd.Series(array1, index = ["Jan", "Feb", "Mar", "Apr"])
```
- a. 1
  - b. 2
  - c. 3
  - d. 4
24. Write the output of the following :
- ```
import pandas as pd
S1=pd.Series([1,2,3,4])
S2=pd.Series([7,8])
print((S1+S2).count())
```
- a. 6
 - b. 4
 - c. 0
 - d. 2
25. To display 4th, 5th, 6th columns from the 7th to 9th rows of a DataFrame df, the correct command is
- a. df.loc[7:9,4:6]
 - b. df.iloc[7:10,4:7]
 - c. df.iloc[7:9,4:6]
 - d. df.loc[7:10,4:9]
26. Fill in the blank to get the output as 3

```
import pandas as pnd
S1=pnd.Series([1,2,3,4], index = ['a','b','c','d'])
print(S1[_____])
```

- a. 'c' b. 2 c. c d. All of the above

SECTION B

27. For the given DataFrame named V

	E1	E2	E3	E4
Name	Anil	Sunil	Vimal	Kamal
Age	23	36	66	43
Dept	Sales	Hr	Accts	Prod

Which command will not print the given output

- a. V['Age':'Dept']
b. V[1:3]
c. V[:-1]
d. V.iloc[1:3]

28. For the given DataFrame named V

	E1	E2	E3	E4
Name	Anil	Sunil	Vimal	Kamal
Age	23	36	66	43
Dept	Sales	Hr	Accts	Prod

What will be the output of V.iloc[1,1:3]

- a. E2 36
E3 66
Name: Age, dtype: object
b. E2 Hr
E3 Accts
Name: Dept, dtype: object
c. Error
d. E1 23
E2 36
E3 66
Name: Age, dtype: object

29. What will be the output, if the following commands are executed from pandas import *

```
D = DataFrame([[10,20,30,40],[100,200,300,400],[33,22,44,55]])
print(D.shape)
```

- a. 12
b. (3,4)
c. [4,3]
d. (4,3)

30. If the following Data Frame is created, which command will create the index from pandas import *

```
D = DataFrame([[10,20,30,40],[100,200,300,400],[33,22,44,55]])
```

- a. D.index=['A','B','C','D']
- b. D.index=['A','B','C']
- c. D.index=['A','B','C']
- d. D.index(['A','B','C','D'])

ASSERTION BASED QUESTIONS: In each of the questions given below, there are two statements marked as Assertion (A) and Reason (R).

Mark your answer as per the codes provided below:

- (A) A is true but R is false.
- (B) Both A and R are true
- (C) A is false but R is true.
- (D) Both A and R are false.

31. Assertion – Two basic data structure in Python are: Series and Dataframe. But both are different from each other.

Reason - Series stores heterogeneous data while Dataframe stores homogeneous data.

- a. Assertion is True & Reason is correct explanation of Assertion
- b. Assertion is True, but Reason is partially True
- c. Assertion is True but Reason is False
- d. Both Assertion and Reason are False

32. Assertion – DataFrame is a two-dimensional Pandas structure, with ordered collections of columns that can store data of different types.

Reason - DataFrame is an array-like structure with two indices or axes – row index (axis = 0) and column index (axis=1). DataFrame is value mutable as well as size- mutable with heterogeneous data.

- a. Assertion is True & Reason is correct explanation of Assertion
- b. Assertion is True, but Reason is partially True
- c. Assertion is True but Reason is False
- d. Both Assertion and Reason are False

33. Assertion (A): Boolean indexing is a type of indexing.

Reasoning (R) : DataFrame.loc(False) function can be used to find the relative values where index value is False

- a. Both A and R are true, and R is the correct explanation of A.
- b. A is true but R is false.
- c. A is false but R is true.
- d. Both A and R are false

34. Assertion (A):

DataFrame.count() function will display the sum of the values from the data frame

Reason (R): axis=0, argument is used to find sum column-wise

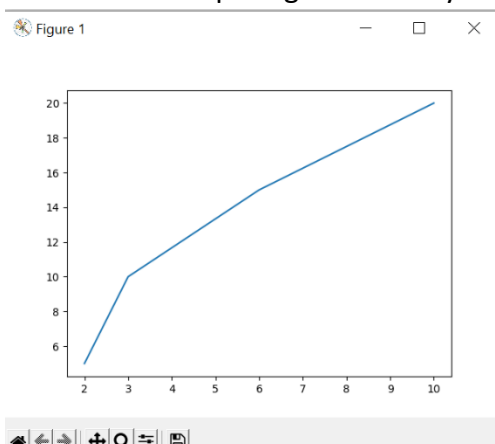

- a. Both A and R are true and R is the correct explanation of A.
- b. A is true but R is false.

- c. A is false but R is true.
 - d. Both A and R are false
35. Assertion (A): sorting is the operation to arrange data in a specific order, `sort_values()` function used to perform the operation
Reasoning (R): Row wise sorting cannot be performed in python dataframe objects
- a. Both A and R are true and R is the correct explanation of A.
 - b. Both A and R are True and R is not the correct explanation of R .
 - c. A is True but R is false.
 - d. Both A and R are false
36. ASSERTION(A) : `legend(labels = ['Text'])` is used to give title to the graph
REASON(R) : `plt.savefig("path")` will save the current graph in png or jpeg format
- a. A is true but R is false.
 - b. Both A and R are true
 - c. A is false but R is true.
 - d. Both A and R are false.
37. Assertion (A): The source code of weka software can be modified and shared as it's an open source data mining software.
Reason (R): Open-source software is computer software that is released under a license in which the copyright holder grants users the rights to use, study, change, and distribute the software and its source code. Read the statements and choose the correct option.
- a. Both (A) and (R) are True, and (R) is the correct explanation of (A).
 - b. Both (A) and (R) are True, but (R) is not the correct explanation of
 - c. (A) is true, but (R) is false.
 - d. (A) is false, but (R) is true.
38. Assertion(A): Matplotlib is a graph plotting Library.
Reasoning (R): It can't plot 3D Charts.
- a. A is True R is False
 - c. A is False R is True
 - b. Both A and R are True
 - d. Both A and R are False

Rishi uses computer and mobile for his personal use. Study the following cases and answer the questions given below.

- I. Once he got the message in Whatsapp that CBSE is announcing the result of class XII tomorrow at 12:00 pm. He forwarded the message to his few friends. But later he came to know that no such announcement was there in CBSE official web-site.
- II. He is visiting several web-sites.
- III. He is getting abuse messages from an unknown number due to which he is thinking of quarreling with that person.
- IV. He registered himself in one website by giving his email id and phone number but later his friend told him about the concept of digital footprint. He is now thinking about canceling the registration so that his personal information can be deleted from that website.
- V. He uploaded one video in his youtube channel where he used one background music downloaded from somewhere on Internet

39. In case (I), he is violating:
- Communication etiquettes
 - net etiquettes
 - copy right
 - None of the above
40. In case (II), he is leaving:
- Negative digital footprint
 - Positive digital footprint
 - Active digital footprint
 - Passive digital footprint
41. In case (III), the unknown person can be called as:
- Cyber bully
 - Internet troll
 - Hacker
 - Cracker
42. In case (IV) which one is correct:
- His data will be deleted forever after cancelling the registration.
 - His data will be deleted after 30 days since it is a digital footprint.
 - His data will never be deleted since it became the digital footprint.
 - As per the terms and condition of that website, data will be deleted.
43. In case (V), he may be violating:
- plagiarism
 - Intellectual property right
 - copyright
 - None of the above
44. Observe the output figure. Identify the coding for obtaining this output.

a)

```
import matplotlib.pyplot as plt
plt.plot([2,3,6,10],[5,10,15,20])
plt.show()
```

b)

```
import matplotlib.pyplot as plt
df.plot(kind='line')
plt.show()
```

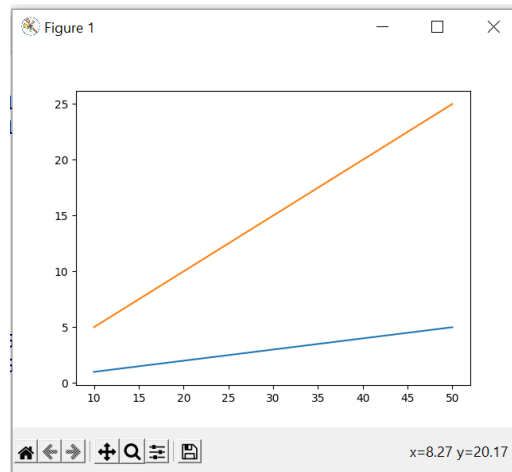

c)

```
import matplotlib.pyplot as plt
plt.line([2,3,6,10],[5,10,15,20])
plt.show()
```

d)

```
import matplotlib as plt
plt.plot([2,3,6.5,10.5],[5,10,15,20])
plt.show()
```

45. Observe the output figure. Identify the code to obtain the same:

a. import matplotlib.pyplot as pl
a = range(10,60,10)
b = range(1,6)
c = range(5,30,5)
pl.plot(a,b)
pl.plot(a,c)
pl.show()

b. import matplotlib.pyplot as pl
a = range(1,6)
b = [10, 20, 30, 40, 50]
c = [5, 10, 15, 20, 25]
pl.plot(a,b)
pl.plot(a,c)
pl.show()

c. import matplotlib.pyplot as pl
a = [1,2,3,4,5]
b = [10, 20, 30, 40, 50]
c = [5, 10, 15, 20, 25]
pl.plot(a,b)
pl.plot(a,c)
pl.show()

d. import matplotlib.pyplot as pl
a = range(10,60,10)
b = range(1,6)
c = range(5,30,5)
pl.plot(b,a)
pl.plot(a,c)
pl.show()

46. For the following data stored in Data Frame R, the command to display the year when there were more than 25 passengers in the month of January is

	Year	Month	Passengers
0	2010	Jan	25
1	2010	Mar	50
2	2012	Jan	35
3	2010	Dec	55
4	2012	Dec	65

a. R['Year'][(R['Month']=='Jan')] & (R['Passengers']>25)]

- b. `R['Year'][(R['Month']=='Jan') & (R['Passengers']>25)]`
 - c. `R['Year'][(R['Month']=='Jan')] and (R['Passengers']>25)]`
 - d. `R['Year'][(R['Month']=='Jan') and R['Passengers']>25)]`
47. Using the above data frame, the command to change the index to the year is
- a. `R.set_index('Year')`
 - b. `R.reindex('Year')`
 - c. `R.reindex=['Year']`
 - d. `R.set_index('Year', inplace=True)`

48. Select the correct output from the following code

```
A= pandas.Series(range(100,105), index =[x for x in 'abdef'])
```

```
S = pandas.Series(range(10,15), index =[x for x in 'abcde'])
```

```
print(A+S)
```

- | | |
|----------------|----------------|
| a. a 110.0 | c. a 110.0 |
| b 112.0 | b 112.0 |
| c NaN | c NaN |
| d 115.0 | d 115.0 |
| e 117.0 | e 117.0 |
| f NaN | f 119.0 |
| dtype: float64 | dtype: float64 |
| b. a 110.0 | d. a 110.0 |
| b 112.0 | b 112.0 |
| c NaN | c 114.0 |
| d 115.0 | d 116.0 |
| e 117.0 | e 118.0 |
| f 120.0 | f NaN |
| dtype: float64 | dtype: float64 |

49. For the Series Object 'Item', the correct command to print the items that are priced more than 250 is

Table	300
Chair	230
Board	275
Screen	500
Bag	125

- a. `'Item'[Item>250]`
- b. `[Item['Item']>250]]`
- c. `['Item']['Item']>250]]`
- d. `Item[Item>250]`

50. Which is the correct command(s) to create the given series

```
Table      300
Chair      230
```

Board 275
Screen 500
Bag 125

- i. Item = pandas.Series([300,230,275,500,125], ['Table', 'Chair', 'Board', 'Screen', 'Bag'])
 - ii. Item = pandas.Series([300,230,275,500,125], index =['Table', 'Chair', 'Board', 'Screen', 'Bag'])
 - iii. Item = pandas.Series(['Table', 'Chair', 'Board', 'Screen', 'Bag'], [300, 230, 275, 500, 125])
- a. Only (i)
 - b. (i) and (ii)
 - c. (i) and (iii)
 - d. All of the above

SECTION C

Shobit is working in an organization as data analyst. He uses Python Pandas and Matplotlib for the same. He got a dataset of the passengers for the year 2010 to 2012 for January, March and December. His manager wants certain information from him, but he is facing some problems. Help him by answering few questions given below:

	Year	Month	Passengers
0	2010	Jan	25
1	2010	March	50
2	2012	Jan	35
3	2010	Dec	55
4	2012	Dec	65

Code to create the above data frame:

```
import pandas as pd
data={ "Year":[2010,2010,2012,2010,2012],
       "Month":["Jan","Mar","Jan", "Dec", "Dec"],
       "Passengers":[25,50,35,55,65]}
df=pd.DataFrame(data)
print(df)
```

51. He wants to print the details of "January" month along with the number of passengers, Identify the correct statement:
- a. df.loc[['Month','Year']]
 - b. df.iloc[['Month','Year']]
 - c. df[['Month','Year']]
 - d. df[('Month','Year')]
52. Which command will help him to delete the month and year column from the Data Frame
- a. df.drop(['Month','Year'],axis=0)

- b. `df.drop(['Month','Year'])`
- c. `df.drop(['Month':'Year'],axis=1)`
- d. `df.drop(['Month','Year'],axis=1)`

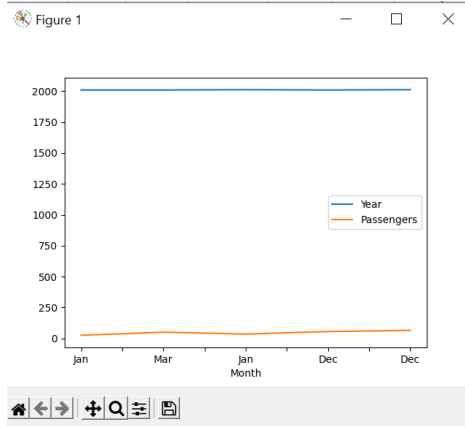

53. To print the rows where the year is 2010, the incorrect command is:

- a. `R.iloc[[0,1,3]]`
- b. `R.loc[[0,1,3]]`
- c. `R[R["Year"]==2010]`
- d. `R[R."Year"]==2010]`

54. Give a command to add a new column Kilometers with data: [55,56,59,90,56,48]

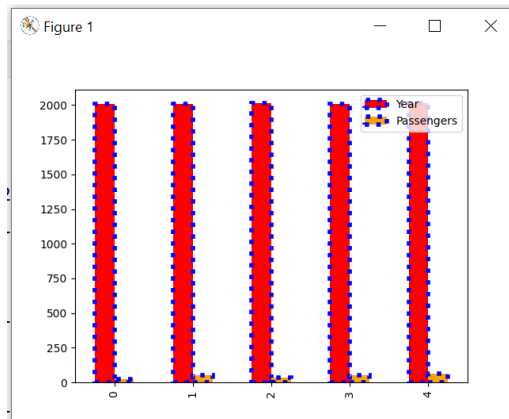

- a. `Df."kms"=[55,56,59,90,56,48]`
- b. `df.add["kms"]=[55,56,59,90,56,48]`
- c. `df["kms"]=[55,56,59,90,56]`
- d. `df[kms]= [55,56,59,90,56,48]`

55. To print the following graph from the Data Frame, the commands to be given are (assuming that the command import matplotlib.pyplot as plt is already given)

- a. `df.plot(kind='line', axes='Month')`
`plt.show`
- b. `df.plot(kind='line', x='Month')`
`plt.show`
- c. `df.plot(kind='line')`
`plt.show()`
- d. `df.plot(kind='line', x='Month')`
`plt.show()`

56. To create the following chart, the correct command is :

- `df.plot(kind='bar', color=['red','orange'],linewidth=4, linestyle=':')`
- `df.plot(kind='bar', x='Month', color=['red','orange'], linewidth=4, linestyle=':', edgecolor='blue')`
- `df.plot(kind='bar', color=['red','orange'], linewidth=4, linestyle=':', edgecolor='blue')`
- `df.plot(kind='bar', color=['orange','red'], linewidth=4, linestyle=':', linecolor='blue')`
